

Perspectives on Sustainability

Please read through all the questions below before starting to write. Make clear references and use sources throughout. The assigned course literature is highly relevant for this paper, but you also need to use other resources.

- What role do values and worldviews play in attaining Sustainable Development? Use relevant literature to explain your views.
- Describe your own view of what sustainability means and critically analyze it using relevant literature.
- Do you think your view is different than that of a student from another background? In that case – how and why? Use relevant literature to explain your view and exemplify.

Your assigned peer-reader will read your text and comment on it. We will also discuss the texts at the seminar.

Write around 1500 words in a word-document or pdf and upload to the student portal as well as e-mailing your assigned peer-readers, **no later than October 1st**

Although some of the questions relate to your personal experiences, **it is important that the assignment is academically written.** Therefore you need to use proper academic references and resources to explain, exemplify and discuss your answers.

Good Luck! | Malin
