

Master in Sustainable Development: Introduction to Interdisciplinary Science

Learning assessment for students

This form will help us get a better picture of you as a student and offers an opportunity for reflection on your own learning process.

1. What knowledge do you want to gain and develop during the course?

2. What academic and practical skills do you want to develop during the course?

3. What kind of metaskills do you think are central to your future work life?

Neumeier (2012): "believes that the metaskills we need in a post-industrial economy are feeling (intuition and empathy), seeing (systems thinking), dreaming (applied imagination), making (design), and learning (autodidactics)."
